

## Requests:

### Functional requirements:

1. Users can register vehicles in the system.
2. Users can request a parking permit.
3. The system shows available parking zones.
4. Security staff can verify permits and record violations.

### Non-functional requirements:

1. System must respond within 2 seconds
2. System must be secure, user authentication is required

## Defect analysis

| Item                | Answer                                     |
|---------------------|--------------------------------------------|
| Defect category     | Functional defect                          |
| Severity            | High                                       |
| Priority            | High                                       |
| Possible root cause | Incorrect date validation logic            |
| Regression test     | Check valid permits are not marked expired |
